Feedback through Graded Peer Evaluation

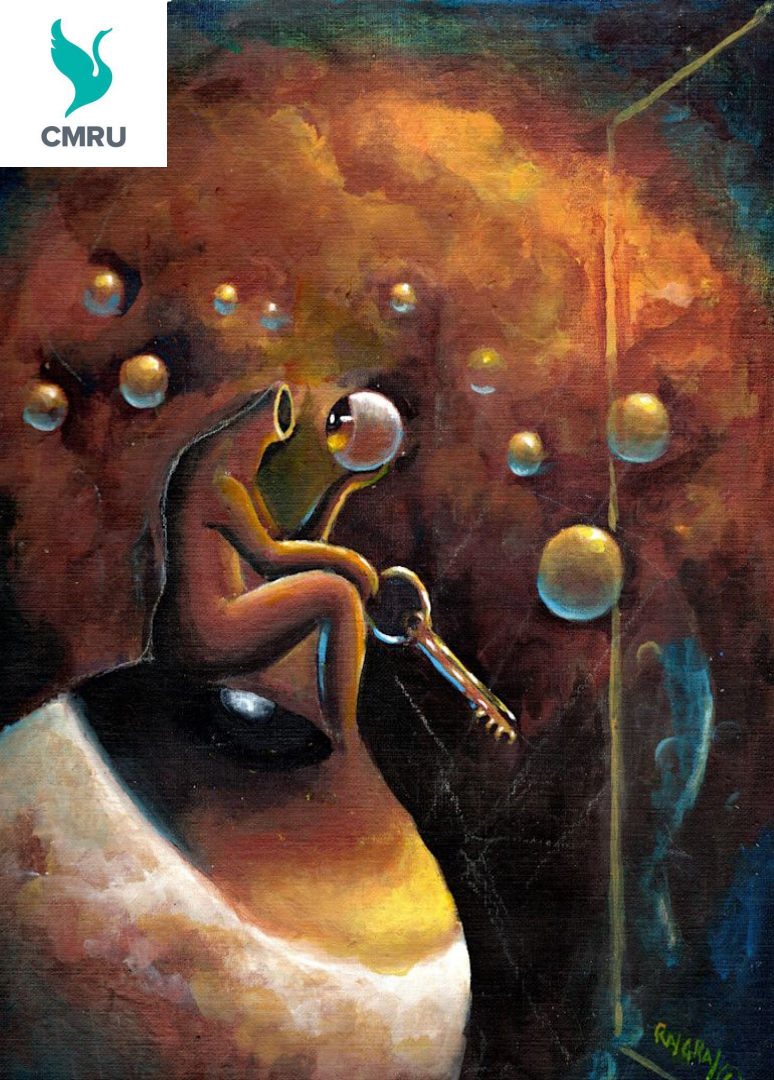

Graded Peer evaluation for:

1. Research
2. Ideation
3. Final Prototyping

Design as Agency.

CMRU

Reflexivity.

“Social space tends to reproduce itself.”
— Pierre Bourdieu

“Structures exist only insofar as they
are instantiated in action.”
— Anthony Giddens.

CMRU

A time to reflect.

Team Formation.

A History of Design

Design before “Design”- Making Craft

1. Making Guided by Craft Knowledge, Not Abstract Planning (Polanyi- **Tacit Knowledge**)

2. Unity of Conception and Execution:
The maker, or craftsman, was central

Japanese Katana

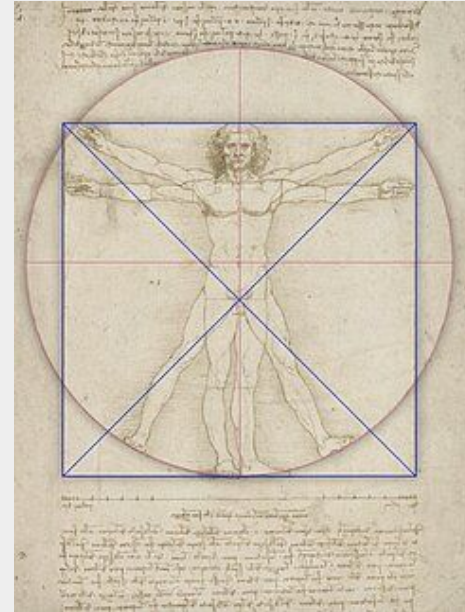

Handloom Weaving

Renaissance: Design as Drawing+Intellect

1. Conceiving before making: design became mental, planning-oriented, and pre-figurative
2. The designer emerged as a thinker- a separation from manual labor.

This distinction between “the hand” and “the mind” shaped Western design thinking for centuries.

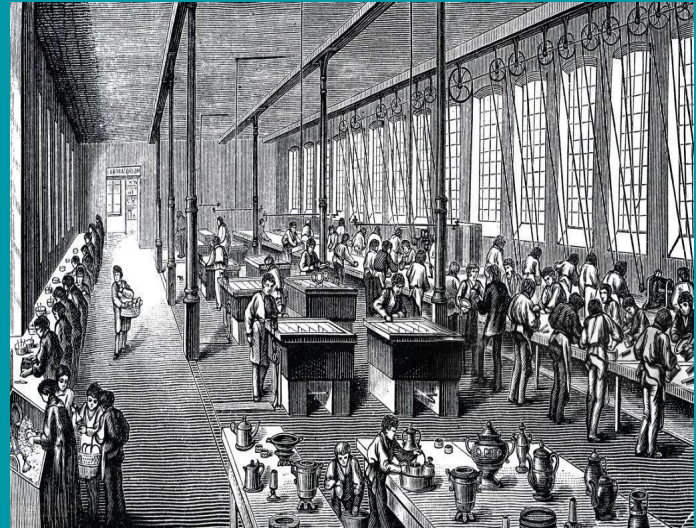

Leonardo Da Vinci. Vitruvian Man, 1490

Enlightenment and Industrial Modernity

1. With industrialization, design took on a rational, technical dimension. The factory demanded standardization- design as specification, rather than craft.
2. Engineering, architecture, and applied arts formalized design as systematic problem-solving.

Here, design became a mediator between humans and machines

Modernism and Postmodernism: Design for “Social Good” and it’s Critique

1. Early 20th century: Design as a moral and social mission. The designer was an objective planner for modern life, directed to serve society.
1. Starting in the 1970s: Design output was not just a pure function, but a cultural language that created meaning and discourse.

Design as embedded in larger social systems

René Magritte. Golconde, 1953

Interdisciplinarity. IDEO

Building a team

1. Who are you? How do you generally work in a team? (Quieter/ more vocal/ work better with assigned work/ group discussion)
2. What do you bring to the team (skills/ competencies)? What do you need from your team?

CMRU

Design Thinking

Design thinking is creative problem solving at its core. It's about going through the process EDIPT- (Empathize, Define, Ideate, Prototype, Test)

Design Thinking

Problem Finding

Emphasize

Define

Problem Solving

Ideate

Prototype

Test

Phases of Design Thinking

CMRU

When must Design Thinking not be used

1. When the problem is clear, stable, and well-defined
2. When there is no room for failure and the context doesn't allow experimentation- either because of the environment or the risks involved with failure
3. When decision power or buy-in is missing- Teams can't implement changes (no budget, no authority).
4. When you need deep analytical rigor, not divergent exploration

Mental Structures of the Economy

How would you define a good business?
How would you define a good vs bad economy?

Trickle Down Effect

Do you believe that the health of a company always has a positive impact on the health of its employees and local economy?

According to you what is the State responsible for? - Welfare, ensuring perfect competition, redistribution

THEMES

1. Pick a local Business and work on their business problem
(Identify the business you will work with. You must have physical access to them and they must be willing to do the project with you)

1. Find a Gap and think of a business idea to address that gap
(Domain and Gap to be identified. For example, there is a gap/ lack in women's sanitary health products and knowledge and we want to address this challenge)

CMRU

3. Address one of the following aspects:

- Are there ways in which local economies can be sustained despite larger global markets? *(Identify a particular sector)*
- How can we reimagine labour to accommodate the overall wellbeing and capabilities of an individual? (Who is excluded from the “benefits” the market promises?)
(Identify a particular sector)
- Women’s Labour: How do we design businesses/cooperatives that support care work and maintenance? *(Identify a demographic)*
